University of Wollongong

Feb 2024 - Nov 2025

- MCS (Software Engineering)

SKILLS

- Full-Stack Development
- AI & LLM Integration
- Python Backend (FastAPI/Django)
- React Frontend Development
- API Design & Development
- Database Management (SQL/Supabase)
- Workflow Automation (n8n)

EXTRACURRICULAR

2024 Indigenous Nationals Volunteer

- Gained teamwork and organisational skills in a fast-paced environment

INTERESTS

- Pools
- Badminton
- Food hunting
- Travelling

LANGUAGE

- English (Professional)
- Mandarin (Native)
- Cantonese (Native)

WORK EXPERIENCE

Online Marketing for Doctor June 2025 - Present

Software Engineer (Intern)

- Lead Solo Full-Stack Development: Built the entire application using a React/TypeScript frontend and Supabase backend, managing the UI, database, and authentication
- Develop B2B Platform Features: Created core functionalities tailored for marketing agencies to manage their end-client campaigns.
- Deliver Automation Tool: Produced a solution that generates complete Google Ads reports, significantly reducing manual creation time for marketing experts.

PROJECT EXPERIENCE

PPC Ads Generator – AI Digital Marketing Platform June 2025 - Present

Full-stack AI platform automating end-to-end creation of Google Ads campaigns for marketing agencies.

Tech Stack: React | TypeScript | n8n | Supabase (PostgreSQL, Edge Function) | Deno | OpenAI (GPT-4o) | Tailwind CSS

Key Contributions: Built full-stack application with React/TypeScript frontend and Supabase backend: engineered n8n workflow to automate ad group creation using RAG approach with vectorized keyword data; implemented core platform features for client/campaign management and AI-generated marketing assets including customer personas and ad copy.

EchoTales – AI Voice-Cloned Storytelling Mar 2025 - Oct 2025

Full-stack web application enabling custom voice-cloned narration for personalised storytelling experiences.

Tech Stack: .NET | ASP.NET Core | React | TypeScript | FastAPI | OpenVoice | PostgreSQL | AWS | Cloudflare R2

Key Contributions: Led AI voice cloning integration via OpenVoice-powered FastAPI micro-service; co-designed and implemented APIs linking micro-service, .NET backend, and React frontend for real-time audio synthesis.

MenuSystem – Restaurant Ordering Backend Nov 2024 - Feb 2024

Backend service for menu browsing, order creation, and order history management for restaurant applications.

Tech Stack: Taro (React) | Django | PyMySQL | MySQL

Key Contributions: Defined frontend-backend protocol and API contracts; implemented Django backend with MySQL database integration for complete menu and order management.
